

Release procedure

Preparation

1. Make sure all issues relating to the release are closed.
2. If any issues are still open, either fix them in the hotfixes branch or post-pone them.
3. Make sure you have the correct Google Maps API key for the MapView.

Pre-execution

1. Pull the latest development branch.
2. Run automatic tests via the test.py script in the tests project.
3. Execute manual tests that can be found in the test report.
4. If any problems are found, go back and fix them and start with the preparation phase again.
5. Merge the development branch to the master branch.

Execution

1. Check for any last minute patches.
2. Write the release notes.
3. Build the release.
4. Execute manual tests.
5. If any problems are found, go back and fix them and start with preparation phase again.
6. Tag release and notes in git and commit to github repo.
7. Profit.
